***/LINMOT S01-72/1000 :**

The LINMOT S01-72 / 1000 is intended for powering the gripper's linear motors through the servomotors which act as a switches.

It takes 400V AC three-phase as input and supplies 72V DC.

AC / DC POWER SUPPLY - PRIMARY SWITCHED - SINGLE OUTPUT

LinMot

- 960 watts output power
- Only 66mm wide
- 3 x 340-550VAC wide range input
- output: 56 - 80VDC
- Parallel connection with load sharing
- Advanced Power Boost
- Operation in any assembly position
- Primary and secondary overvoltage protection
- Overtemperature protection

***/ LINMOT c1150-ds-xc-1s-000 servomotor:**

The C1100 series servo motors are axis controllers, with 32-bit position resolution and an integrated power stage, for linear motors...

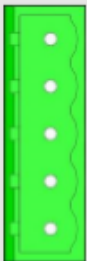

The controllers are suitable for the simplest and standard positioning of tasks with point-to-point movements.

1.1.3/ Real scheme:

1.2/Mechanical part:

The gripper is properly installed on the robotic arm, we no longer have the problem of collision of the gripper with the robot during homing.

1.3/Software part:

In order to control the gripper there are three possibilities:

- + Control with LinMot Talk software
- + Control with Motion Perfect software
- +Control with ROS

1.3.1/ Control with LinMot Talk software:

Every part of the gripper could be controlled separately with linmot talk, after connecting the servomotor to the laptop through the USB.

These boxes are to be ticked by order:

1: Switch On 2: /Quick Stop 3: Enable operation 11: Home

LinMot-Talk 6.8
